

Quick and Punchy
Extra information must be easy to find
Cannot confuse you
Has to be visually appealing

1. Download Github
2. Download a text editor such as Atom
3. Make a folder on your computer called Github
4. Within that make another folder - this is your repository
5. Open Atom and open your repository
6. Create a file that you save as index.html
7. Go to Github online and click settings
8. Publish your website under 'Github Pages'
9. Commit changes on your computer
10. Push to your website

What a nice font
